## SEALING SOLUTION THAT GOES BEYOND FIRE.

The safety standards including various attributes demanded by energy and industry projects make them some of the most uncompromising, exacting engineering works of all. For these critical specifications, Hilti multi-cable transit systems (MCT) deliver you a high-performance but practical solution for creating fire-, water- and gas-resistant protective seals around cables and pipes.

### Water Tightness

Hilti Cable transit systems are tested up to 4.5 bar for water tightness in accordance with the applicable standards minimizing damage in case of accident.

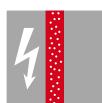

### Gas

Hilti Cable transit systems are tested up to 3 bar for Gas and Air tightness supporting compliance with customer application requirements.

### Resistance against mold & mildew

Hilti Cable transit systems' rubber components were tested according to ASTM G-21 determining the effect of fungi, receiving a rating of 0. Therefore they can be considered mold and mildew resistant.

### Electromagnetic Shielding

The EMC product lines of the Hilti Cable transit systems, were designed and tested to act as an Electro Magnetic shield at specific frequencies.

### Seismic Performance

Hilti Cable transit systems are tested for their performance during and after seismic actions showing excellent smoke tightness and excellent fire performance.

Hilti PROFIS cable transit planning software and AVEVA PDMS library.

The Hilti PROFIS cable transit planning software helps you achieve high safety standards right from the very earliest stages of your project. It helps you calculate and select frames and modules of the right dimensions for your projects, prepares accurate bills of materials and lets you define each individual cable according to the needs of the installation. This easy-to-use program helps you save time and costs right from the word go.

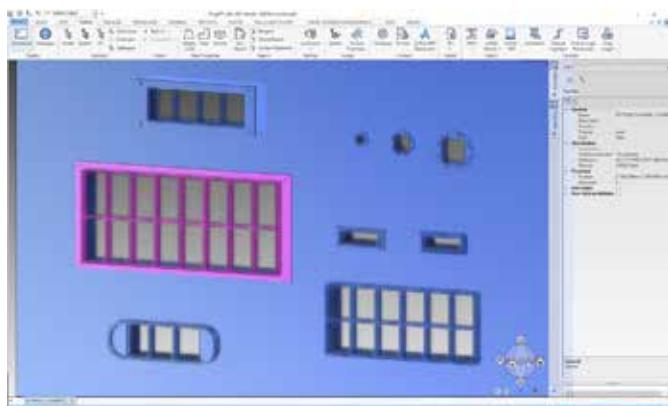

- Designing and calculating the frames and modules required according to the size of the opening and applicable materials (CFS-T SB, CFS-T SBO, CFS-T SS, CFS-T SSF, CFS-T RR). Precise planning of all cable transits according to the number, size and type of cables.
  - Adding of cables by xls import is possible.
  - Preparation of parts lists and drawings to be used as a basis for ordering the items required for a project.
- 
- Presentation of the frame packing and cable layout plans for each cable transit, plus documentation containing all project-relevant information.
  - Export into AutoCad files is possible.
  - The Project Manager incorporated in the Hilti planning software takes the user step-by-step through the project, designing each cable transit on the basis of the specific cable configuration.

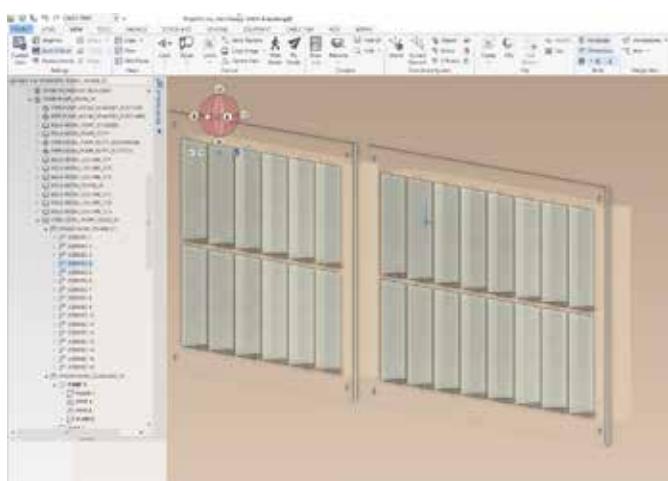

#### Features of Hilti PDMS library:

- 2-level categorization for easy selection
- Structural opening created automatically
- Combo frames placed in one step
- Quick BOM from Hilti Part-list button

#### By documenting CFS-T objects in plant's entire 3D model, customers can benefit from:

## QUICK, EASY AND VERSATILE.

The Hilti cable transit system.

### One system – a host of advantages

Designed as a modular system, the Hilti Cable Transit System solves three problems simultaneously. These versatile sets consisting of the fire-resistant, gas- and watertight basic module, module adapter and core module not only seal around cables quickly and reliably, they're also re-usable. That saves time, cuts costs and helps keep your inventory to a minimum.

### Basic module

The basic module for sealing around cables to a tolerance of 2-3 mm (without use of an adapter). The modules are supplied in a joined-together state but can be easily separated for individual use. Available in 7 different module sizes (15, 20, 30, 40, 60, 90 and 120mm).

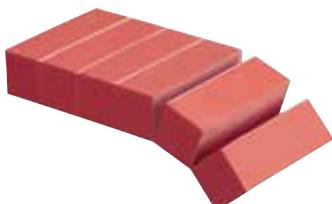

### Adapter module

Adapter modules in black or gray for sealing around cables to a tolerance of 3-5 mm.

### Core module

The core module is used as a filler where space is reserved for future cable installations.

### Filler modules

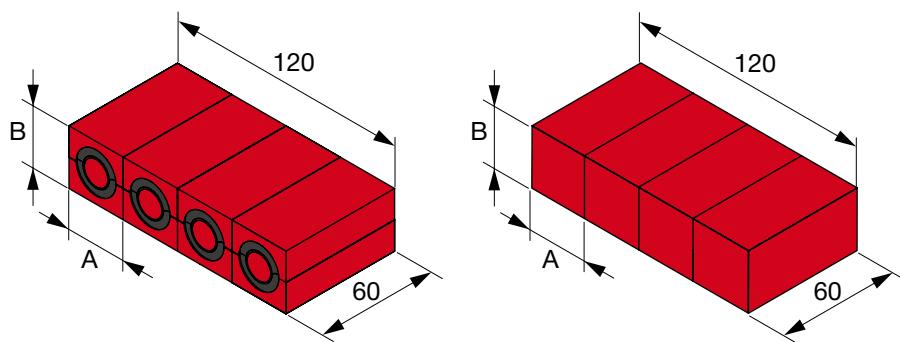

Space reserved for future cable installations can be filled with the filler modules in the sizes 5, 10, 15, 20, 30, 40 and 60. The filler modules are supplied in a joined-together state (filler module blocks) but can be easily separated for individual use.

Hilti fixed inner diameter modules are fire resistant, gas and watertight, designed for precise and fast installation in case of having Multiple cables with same diameter.

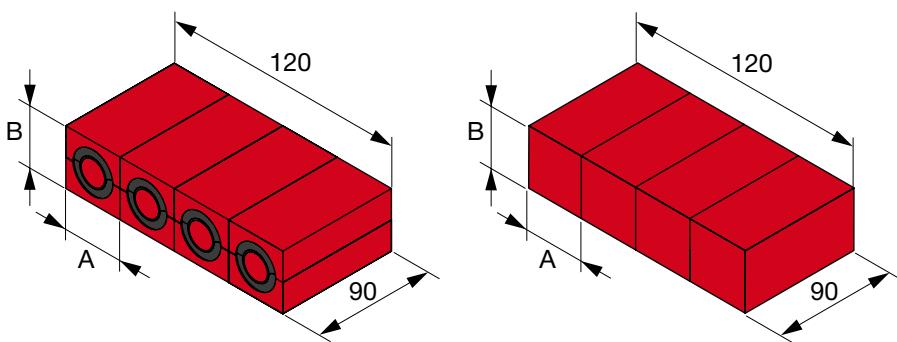

The modules are supplied in a joined-together state but can be easily separated for individual use. Available in 4 different module sizes (15, 20, 30, 40).

## CLEVER ACCESSORIES.

### **Wedge compression kit**

The CFS-T WD 120 wedge compression kit is used to allow quick and easy compression of modules and filler blocks for an effective seal. The sealing wedge can be placed anywhere within the frame and there is only one central bolt to be tightened.

Available with bolt and counter-plate made from galvanized steel or A4 stainless steel material.

The CFS-T WD 120 wedge compression kit is supplied complete with 4 anchor plates, one fixing anchor plate, Hilti ruler and lubricant (30 g).

### **Anchor plate**

The anchor plate facilitates assembly of the cable modules and filler modules, secures these within the frame and increases tightness of the seal against static and dynamic pressure. The anchor plate is available in galvanized steel, stainless steel material or in aluminium.

Use one anchor plate between each row of modules and also to secure the CFS-T WD 120 wedge.

### **Fixing anchor plate**

The fixing anchor plate is used in conjunction with the module squeezer. After precompression of the modules, the fixing anchor plate can be secured by tightening the screws against the frame. It thus holds the rows of modules in their precompressed position. This facilitates insertion of the last module and the wedge seal. Use of the fixing anchor plate is recommended in situations where a large number of cables pass through the transit frame.

### **Module squeezer**

The module squeezer uses the screw jack principle to achieve easy precompression of the modules before insertion of the row, or last two rows, and thus facilitates further assembly of the cable modules and insertion of the wedge seal.

### **Wedge puller**

The wedge puller is used as a disassembly tool to aid removal of the CFS-T WD 120 wedge seal without damage to allow subsequent retrofitting of additional cables.

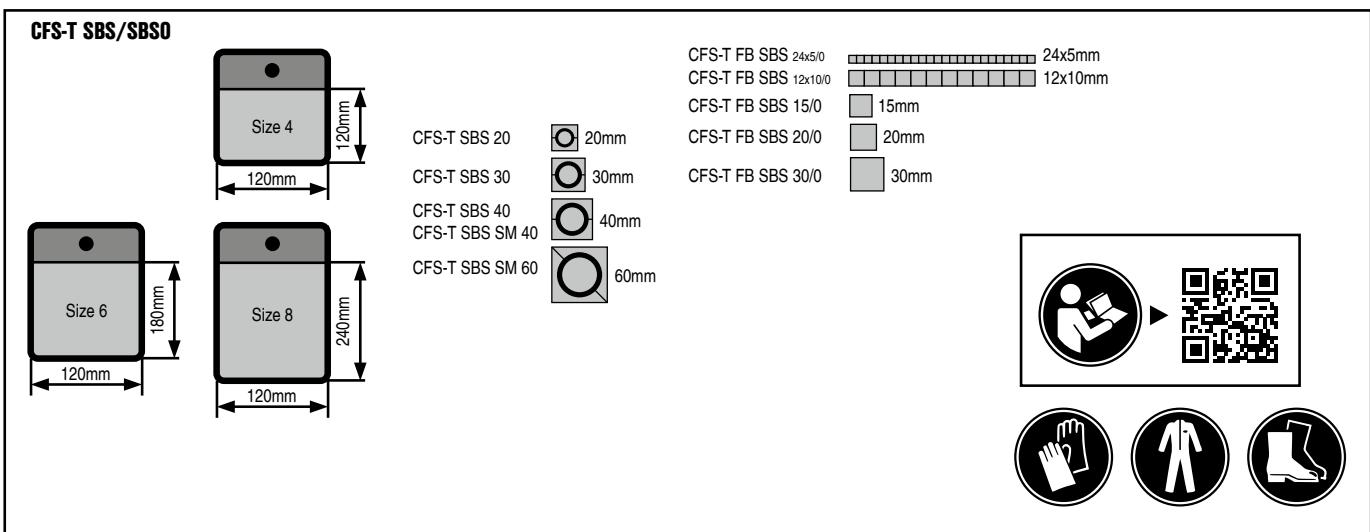

### **Lubricant**

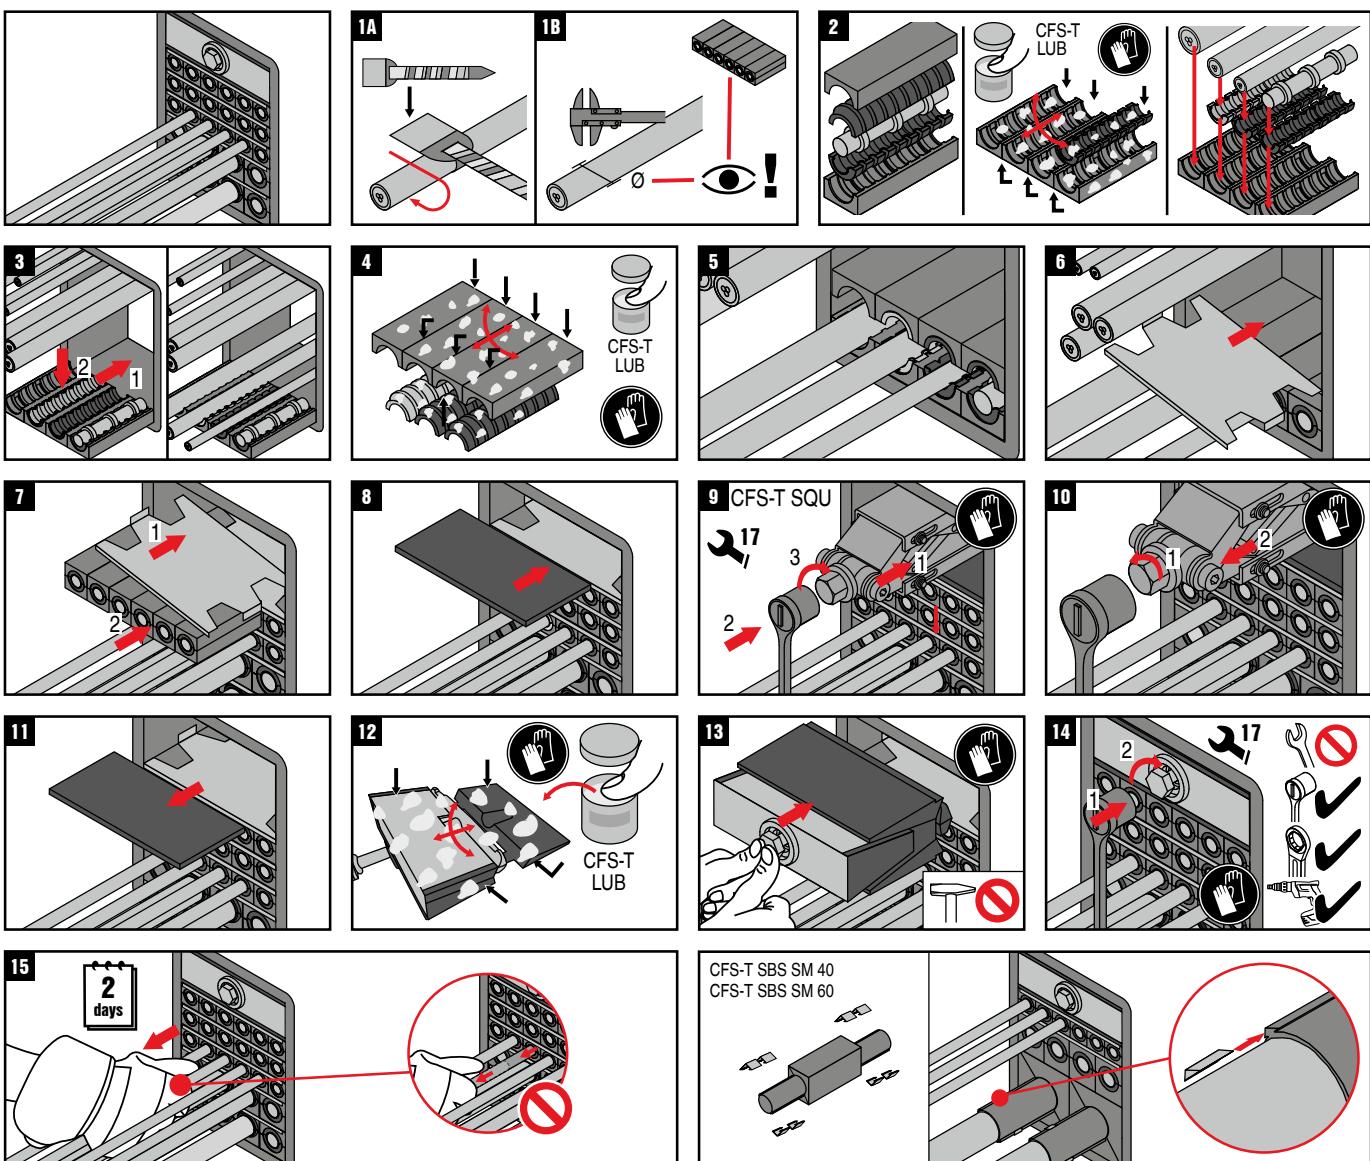

The Hilti CFS-T LUB is lubricant which must be used to grease all rubber module parts during assembly to facilitate installation, ensure sealing effect to achieve required water and gas tightness of the system, as well as it prevents modules from sticking together in case they are disassembled. Lubricant is available in two sizes 30gm and 500 grams.

## INSTALLATION OF TRANSIT FRAME CFS-T SBS/SBSO

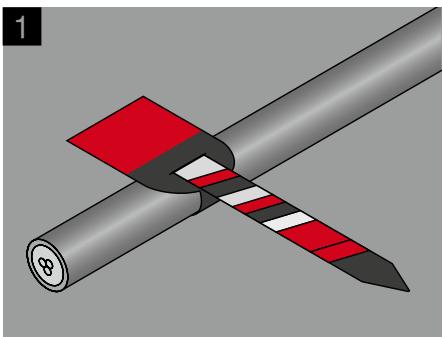

## INSTALLING THE CFS-T SB TRANSIT FRAME IN CONCRETE

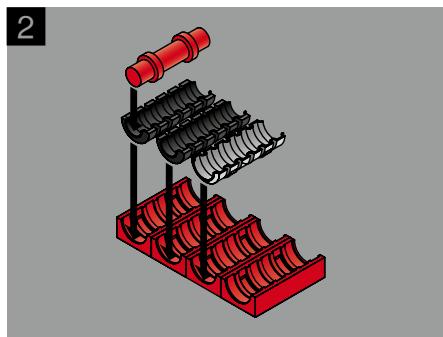

## INSTALLING THE CFS-T SBO TRANSIT FRAME IN CONCRETE

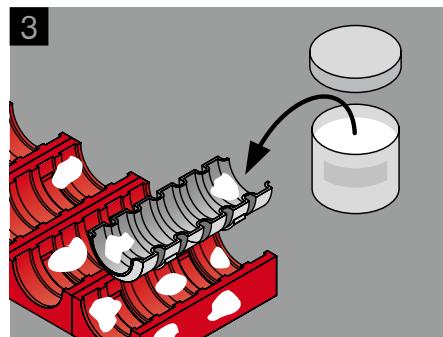

## INSTALLING THE SYSTEM – THIS IS HOW IT'S DONE IN A FEW EASY STEPS.

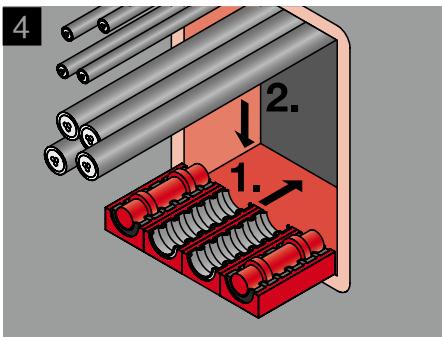

Wrap the Hilti size gauge around the cable in order to determine the module and adapter size required.

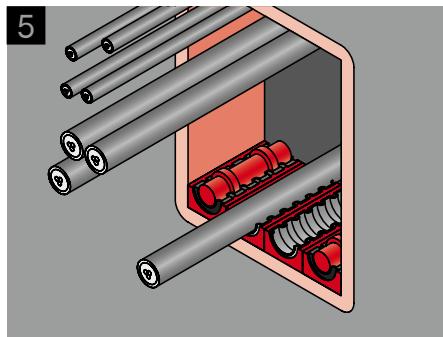

If necessary, remove the black adapter and replace it with one of the correct size or, depending on the size required, use the basic module without the adapter.

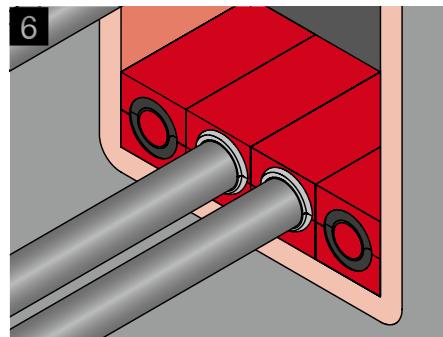

Carefully apply Hilti CFS-T LUB lubricant to all system parts.

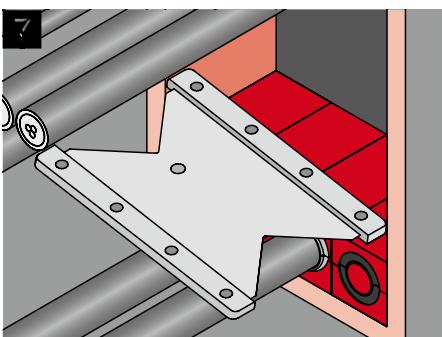

Place the open module in the frame beneath the cables.

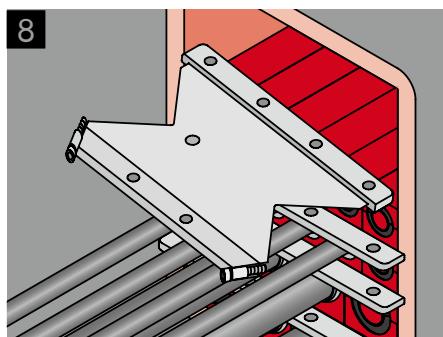

Position the cables in the module.

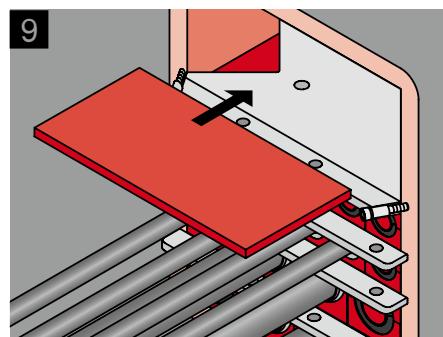

Close the module by fitting the appropriate top half.

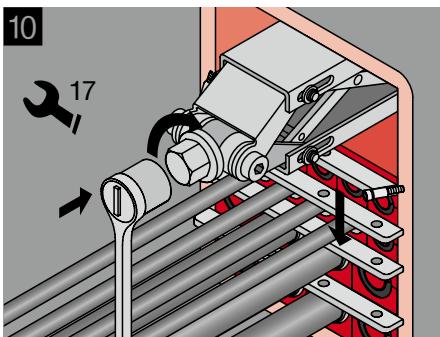

Place the anchor plate on top of the module row and then continue with the next row as described above, using modules of the appropriate sizes.

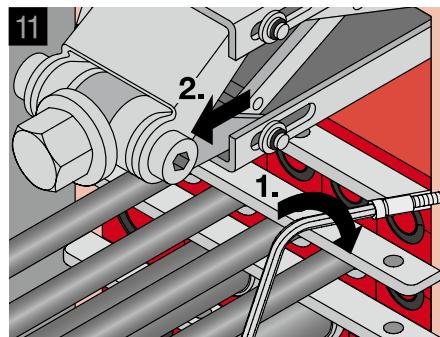

Place the fixing anchor plate on top of the second-last module row.

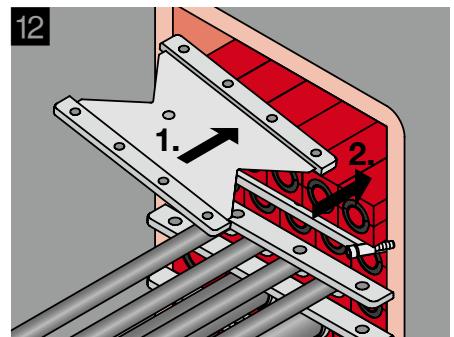

Place the pressure plate on top of the last anchor plate in the frame.

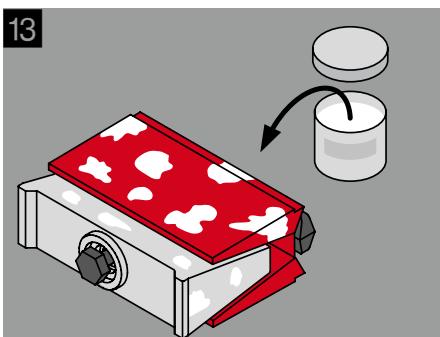

Position the module squeezer centrally in the space above the last module and apply pressure by turning the spindle with a suitable wrench.

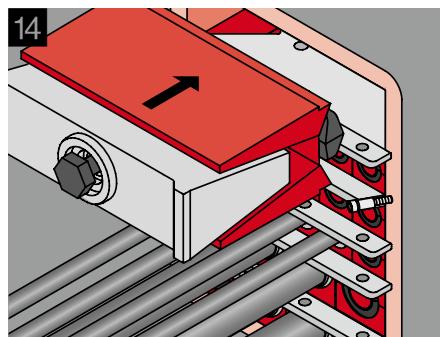

Tighten the screws on the fixing anchor plate. Remove the module squeezer. The modules remain compressed, making it easier to insert the wedge seal.

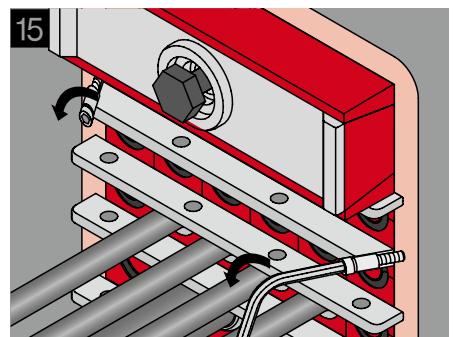

The last anchor plate and module row can then be inserted.

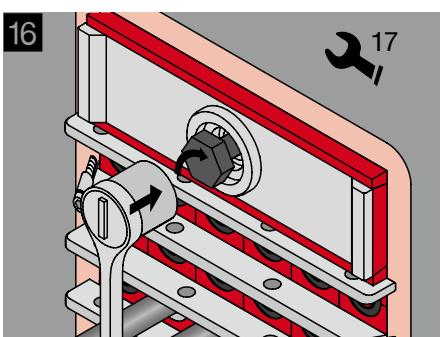

Apply lubricant to all surfaces of the CFS-T WD 120 wedge seal.

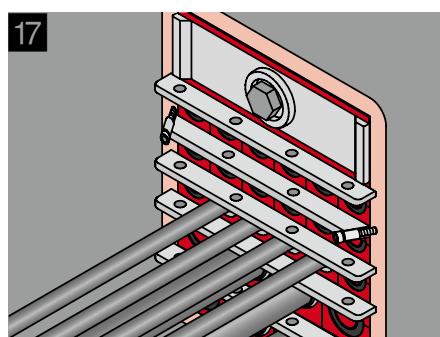

Push the wedge seal into the remaining space in the frame.

Release the screws on the fixing anchor plate before tightening the bolt in the wedge seal.

Secure the whole assembly by tightening the bolt in the wedge seal with a suitable wrench.

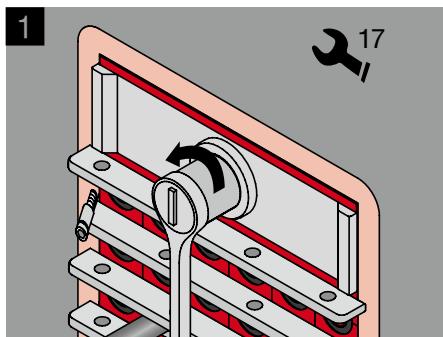

Make sure that all modules have been correctly installed in accordance with the points in the checklist.

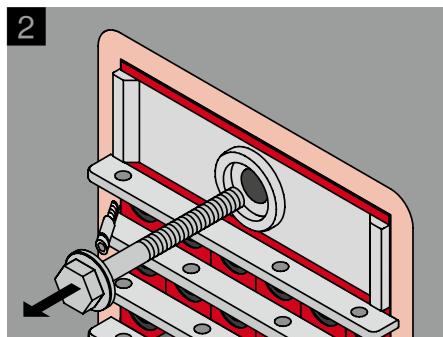

#### Technical information

- Is the wedge seal completely, or almost completely, within the frame?
- Are all modules securely seated behind the raised edge of the anchor plate where they cannot fall out?
- Has the right number of modules been installed? Check the original installation plan.
- Have modules of the correct size been installed? Check the original installation plan.
- Have module adapters and core modules of the correct color been installed (gray, red, black or none)?
- Were all modules, adapters and core modules well lubricated?

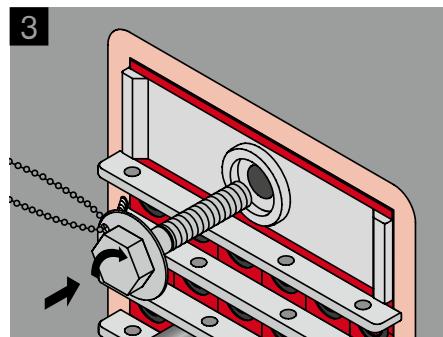

## EXCHANGING THE MODULES QUICKLY AND EASILY.

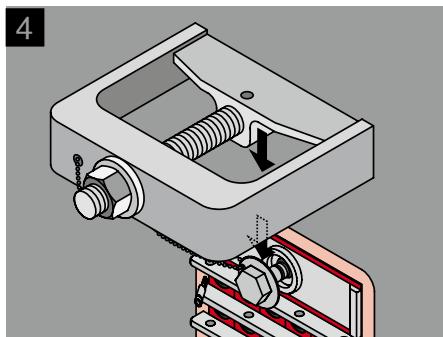

Use a wrench to unscrew the bolt in the wedge seal.

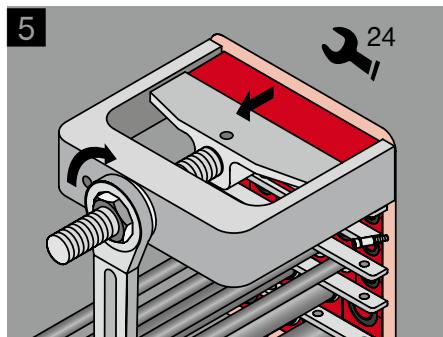

Remove the bolt from the wedge seal.

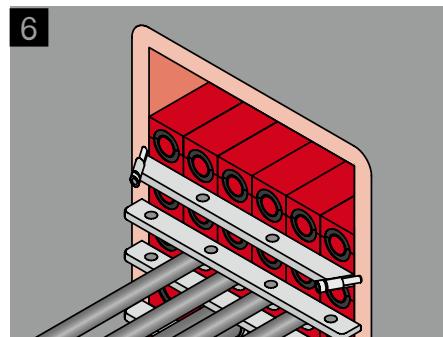

Insert the pulling bolt (attached to the wedge puller).

Bring the CFS-T WD 120 wedge puller into position so that it grips the head of the pulling bolt.

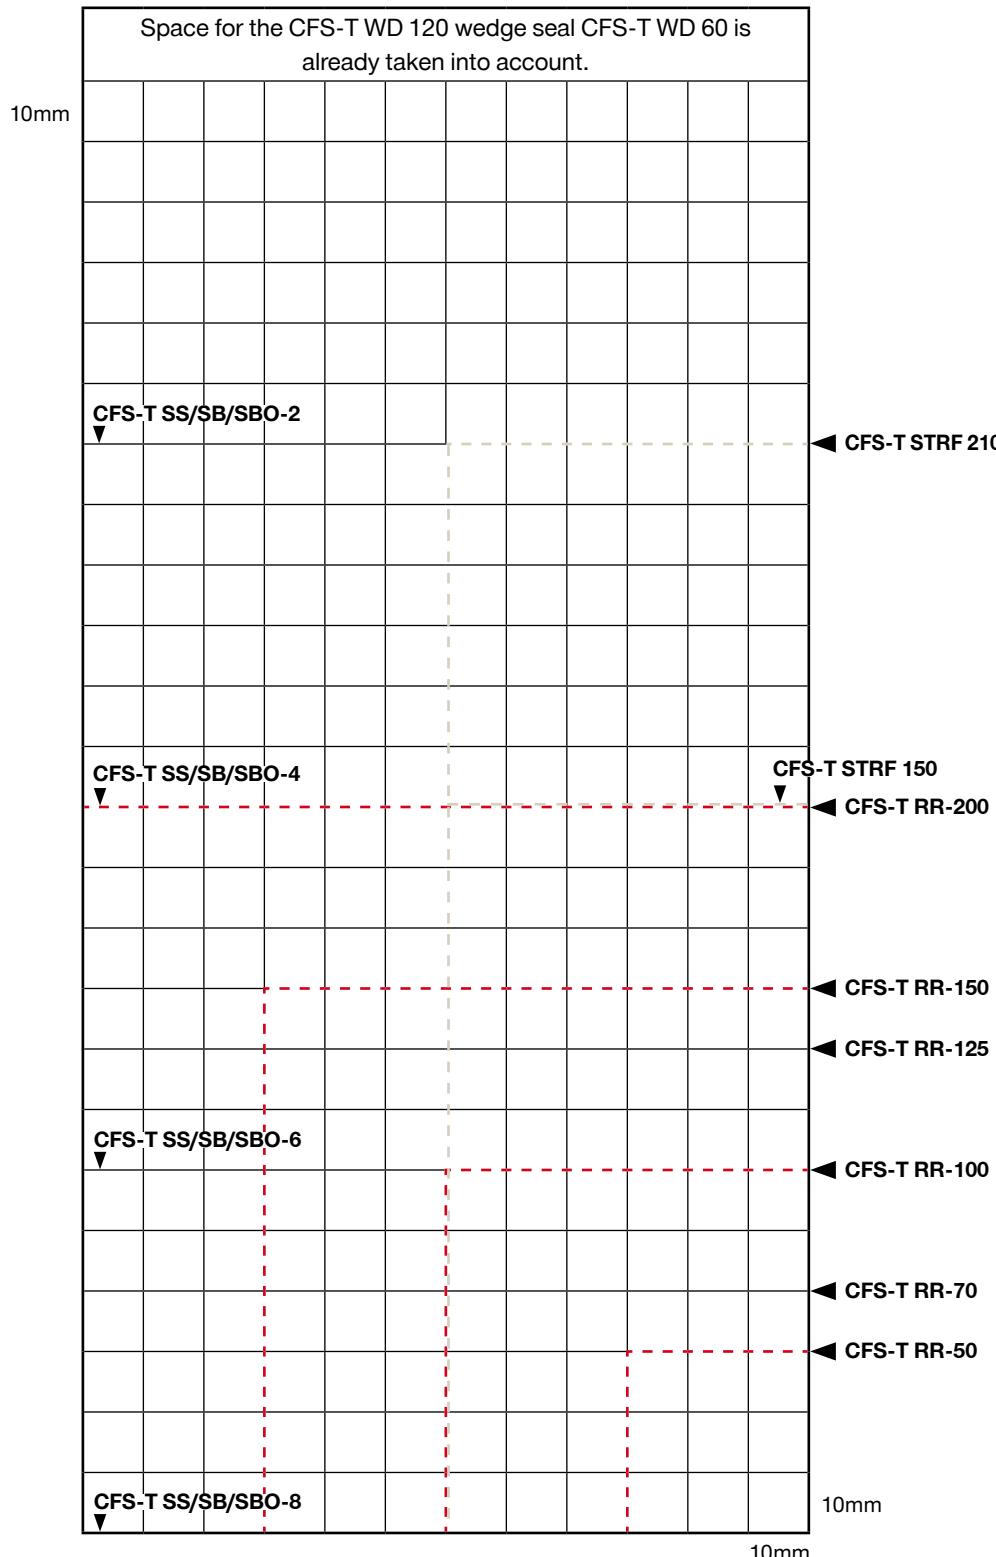

Pull the wedge seal out of the frame by turning the nut on the puller with an M24 ring wrench.

Remove the applicable modules from the frame and then follow the installation instructions when refitting the required items.

## INSTALLING THE SYSTEM - THIS IS HOW IT'S DONE IN A FEW EASY STEPS.

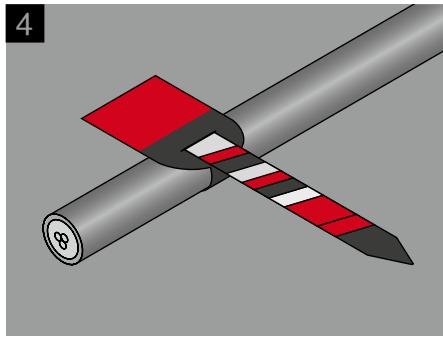

Check the size of the opening to ensure that the plug seal will fit snugly.

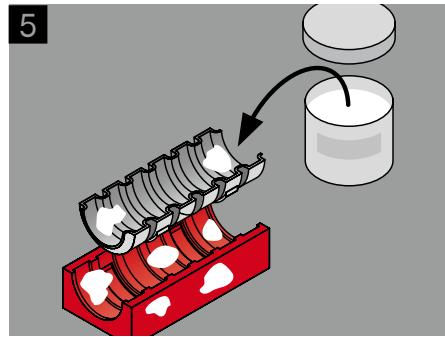

Lubricate and push the plug seal into the opening.

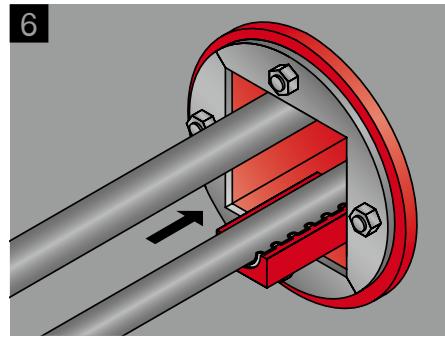

Install the cables in accordance with the frame packing plan.

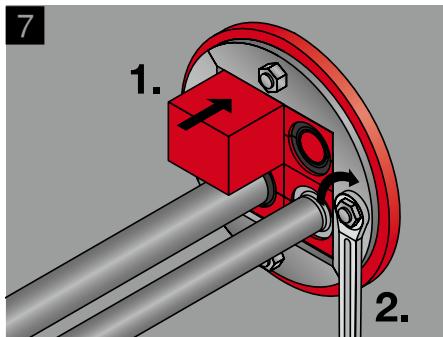

Use the Hilti size gauge to determine the modules required.

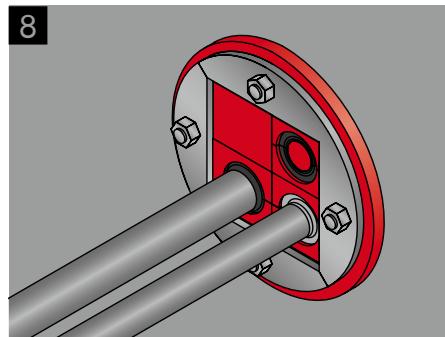

Lubricate all system parts carefully with Hilti lubricant.

Insert the modules, row by row, and lay the cable on top. Rotate the modules through 90° if necessary.

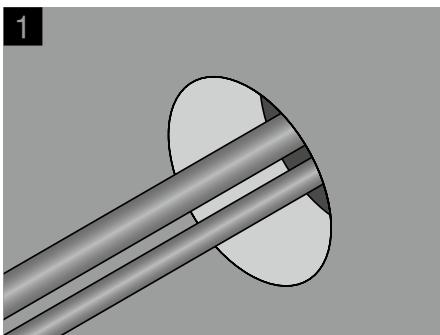

After inserting the last module (can be a blank module), use a ring wrench to tighten the bolts on the frame.

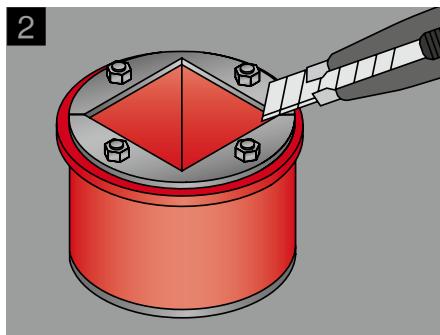

Check that the modules are seated and installed correctly.

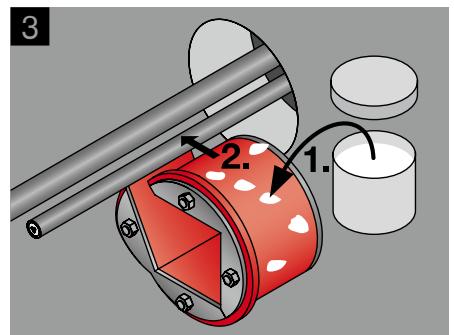

## INSTALLING THE SYSTEM WHERE CABLES ARE ALREADY IN PLACE.

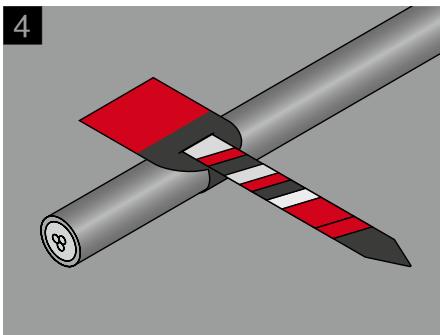

Check the size of the opening to ensure that the plug seal will fit snugly.

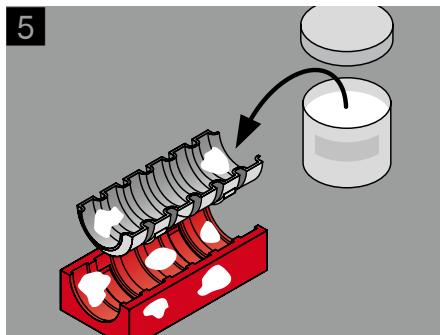

In situations where cables are already in place, use a sharp knife to cut right through the plug seal at a corner of the frame.

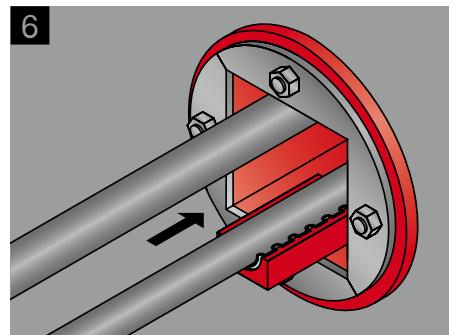

Lubricate and slip the opened frame over the cables and then push the plug seal into the opening (tap in with a hammer if necessary).

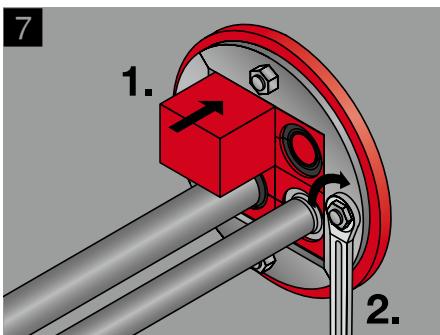

Use the Hilti size gauge to determine the modules required.

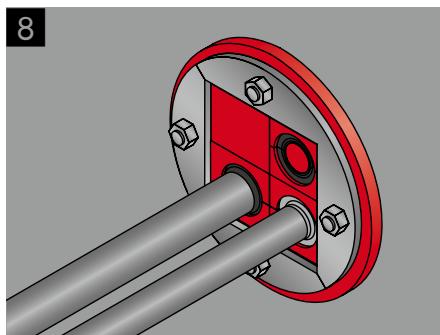

Lubricate all system parts carefully with Hilti lubricant.

Insert the modules, row by row, and lay the cable on top. Rotate the modules through 90° if necessary.

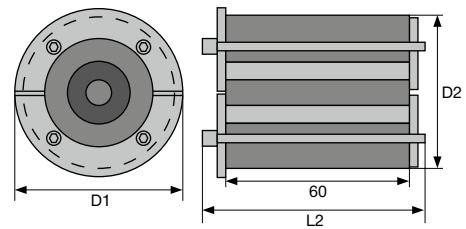

After inserting the last module (can be a blank module), use a ring wrench to tighten the bolts on the frame.

Check that the modules are seated and installed correctly.
